REALTIME PERCEPTION · AUTONOMOUS SYSTEMS

✉ jerrin.bright@uwaterloo.ca | 🏠 jerriebright.github.io | 📷 jerriebright | 🌐 jerriebright

Summary

My ultimate vision is to enhance the autonomy of machines to aid human society. In particular, I believe that a robot's physical intelligence is the key to automate many inhumane physical labors. Thus, as a researcher at VIP Lab, I will be working towards enhancing the visual understanding of robots for social tasks using semantic modeling & 3D mapping.

Education

University of Waterloo

MASC IN SYSTEMS DESIGN ENGINEERING

Ontario, Canada

Starting September 2022

- Research: Ubiquitous Semantic Modelling and 3D Mapping of Unstructured Environments.
- Supervisor: Dr. John S Zelek

Vellore Institute of Technology

B.TECH. IN MECHANICAL ENGINEERING

Chennai, India

July 2018-April 2022

- Research: An End-to-End Autonomous UAV System in GPS-Denied and Unstructured Environments.
- Supervisor: Dr. Arockia Selvakumar Arockia Doss

Thesis

Vellore Institute of Technology

SUPERVISOR: DR. AROCKIA SELVAKUMAR AROCKIA DOSS

Chennai, India

April 2022

- A robust learning-based obstacle avoidance method was proposed leveraging feature enhancing networks.
- An inspection module base on a novel sense-switch-act approach was designed and experimentation were done.
- Localization leveraging inertial data and sensor fusion via Extended Kalman Filters with ORB features were done.
- A dataset consisting of more than 10,000 image frames, corresponding navigation command and state was made.

Area of Expertise

Simulation Tools	: AirSim, Fusion360, SolidWorks, Proteus, Gazebo, RViz, MATLAB, SOFA
Programming Tools	: C, C++, Python, Embedded System, HTML, CSS, JS, PHP
ML Tools	: OpenCV, TensorFlow, Matplotlib, NumPy, Keras, PyTorch, Scikit
Operating System	: Linux Ubuntu, ROS, Raspbian OS, Window
Languages	: English, Tamil

Publication

Kinematic Study of Mobile Platform in Parallel Kinematic Manipulators using LM-BP ANN for angular drilling operations

IEEE ADVANCED ROBOTICS AND MECHATRONICS

ME-CapsNet: A Multi-Enhanced Capsule Networks with Routing Mechanism

IEEE INTERNATIONAL CONFERENCE ON ELECTRONICS, COMPUTING & COMMUNICATION TECHNOLOGIES

A Comprehensive Study on Autonomous Navigation using Learning Techniques for Robotic Systems

ELSEVIER- JOURNAL OF ROBOTICS AND AUTONOMOUS SYSTEMS

Optimization of quadcopter frame using generative design and comparison with DJI F450 frame

INTERNATIONAL CONFERENCE OF ROBOTICS, INTELLIGENT AUTOMATION AND CONTROL TECHNOLOGIES

Research Experience

Indian Institute of Science

RESEARCH INTERN, AI AND ROBOTICS PARK (ARTPARK)

Bangalore, India

July 2021- April 2022

- Autonomous navigation of UAVs in uncluttered and unstructured environments using various sensor sub-systems.
- Implementation of Model Predictive Control, Control Barrier Functions, DL based Depth Estimation, etc.
- Hands on with Jetson boards, Realsense, Jevios components and turtlebot, DJI M600, Jetbots and custom UAVs
- **Supervisors:** Mr. Badrinarayanan Rangarajan and Prof. Suresh Sundaram

McMaster University

GLOBALINK RESEARCH INTERN

Ontario, Canada

July 2021- September 2021

- Designing of a 4 DoF soft robotic manipulator in PyBullet simulation engine using Soft Motion (SoMo) toolkit.
- Supplied sinusoidal torque to the actuators and plotted the velocity, position, acceleration, and input (torque) to analyze different actions.
- **Supervisor:** Prof. Gary Bone

Arizona State University

SUMMER RESEARCH INTERN

Arizona, USA

May 2021 - July 2021

- Using laser scanning, and photogrammetry to digitize environments via visualizing data collected from sensors fusing into a unified system. DL algorithms are used for automated analysis.
- The digital representations made will be processed to provide insights to builders, and stewards.
- **Supervisor:** Prof. Thomas Czerniawsk

Aero2Astro

AUTONOMOUS SYSTEM DEVELOPER - INTERN

Chennai, India

October 2020- April 2021

- Developing ROS-based autonomous navigation firmware using Visual Inertial SLAM concepts for indoor environment.
- Implementation was based on Sensor Fusion techniques, Extended Kalman Filters and is aimed to eradicate the need for GPS thus making the system/ firmware more reliable.

BrainMagic InfoTech Pvt

DATA SCIENCE INTERN

Chennai, India

May 2020- July 2020

- Automobile fault detection of more than 10 classes using vision techniques resulting in an IOU of 95%.
- Dimensional analysis was done to locate defects and monitor them. Performance was enhanced using transfer learning with residual networks and data augmentation.
- It was initially deployed in Heroku and finally deployed in AWS using Amazon Sagemaker and S3 Buckets.

Yuan-Ze University

PROJECT RESEARCH INTERN

Taoyuan City, Taiwan

April 2020- June 2020

- Built a robust smart parking system using semantic segmentation with Convolutional Conditional Random Fields and Atrous Convolution enhance the visual capability of the system.
- **Supervisor:** Prof. Wei-Tyng Hong

Honors & Awards

Graduate Research Fellowship, University of Waterloo, Canada

Globalink Graduate Fellow, MITACS Canada

Outstanding Research Paper Award, RIAC International Conference, 2020

Recognized Galactic Problem Solver, NASA International Space Challenge, 2020

Winner, IEEE Robotics Competition (Law Follower), IIITDM Kanchipuram

Top Ten Internationally, International Planetary Aerial Challenge, 2021

Runner-up, IEEE Hackathon on Autonomous Drone Applications

Membership

Atom Robotics, Co-Founder and Senior Advisor

VIT- Robotics Club, Technical Head

IEEE, Student Member

IEEE, Robotics and Automation Society (RAS) Member

National Service Scheme, Active Volunteer

ValueML, Machine Learning Contributor

Madras Scientific Research Foundation, Research Fellow

Projects

Autonomous UAV Navigation using Imitation Learning

May 2021- July 2021

INDIAN INSTITUTE OF SCIENCE, BANGALORE

- Implemented a simple UAV navigation using imitation learning technique.
- The policy was trained using the dataset from RRT-MPC-based UAV navigation in cluttered environments using AirSim simulation environments.
- Attention-based networks were used as the base model to imitate the expert to find the policy.

SLAM embedded AGV for autonomous navigation

Sep 2020- Oct 2020

VELLORE INSTITUTE OF TECHNOLOGY

- Implemented 3D mapping using Kinect and IMU sensors in an indoor environment.
- The Visual Inertial Navigation System was used to make the 3D map simulated in the Gazebo environment and visualized 2D in RViz.
- Feature extraction via Oriented fast and Rotated Brief (ORB) was used for extraction and tracking.

Robust Chest X-Ray Detection Architecture

Jan 2020- April 2020

SELF

- Built a convolutional system for x-ray detection of 14 different chest diseases
- Some of the important tools used in the system are transfer learning fusing Residual Networks with UNet, Data Augmentation techniques, and autonomous cropping using contours and extrema.

Autonomous MAV enhanced with door-to-door delivery topographies

Jan 2020- April 2020

EVANTRA- INDIAN INSTITUTE OF TECHNOLOGY, BOMBAY

- Developed a ROSpy based control system for a MAV to transverse to a set of GPS setpoints autonomously picking and delivering a package.
- The Control System has two modules, namely the Altitude (AC) and the position (PC) controller.
- AC stabilizes the UAV using a PID-based controller. PC takes in the target GPS coordinates and has setpoint values and navigates successfully.

Autonomous Planetary System for Mars Exploration

Jan 2020- April 2020

ATOM ROBOTICS, VELLORE INSTITUTE OF TECHNOLOGY

- Designed a VTOL-UAV from scratch including CFD analysis for propellers and Aerofoil.
- Designed and tested PCBs using Fritzing. Communication using XBee 900MHz. ROS was used for Software systems (Visual SLAM and PID Control for rudder, elevator, and ailerons for horizontal and one for R-P-Y during lift).

Custom 3D Pose Estimation Toolkit for Robotic Systems

Jan 2020- April 2020

AERO2ASTRO, INDIA

- Developed a toolkit to reconstruct ubiquitous environments using Oriented FAST and Rotated Brief feature detector and descriptor, FLANN for matching, RANSAC for outlier removal, Optical flow, PnP (DLT and Levenberg) for estimating the pose of the robot.

Competition-based Robots

Jan 2020- April 2020

ATOM ROBOTICS, VELLORE INSTITUTE OF TECHNOLOGY

- Designed and built Intelligent Ground Vehicles, Planetary Aerial Systems, Law Following Robot, Obstacle Racer, Robo-Soccer, Maze Runner, Sumo Robot, BattleBots with my team, Atom Robotics.

Courses

SYDE671, Advanced Image Processing

SYDE672, Statistical Image Processing

MEE1045, Mechatronics System Design

MEE1027, Instrumentation and Control Engineering

MAT3003, Complex Variables and Partial Differential Equations

CSE1002, Problem Solving and Object Oriented Programming

MEE2001, Machine Drawing

Declaration

- I, Jerrin Bright, affirm that the aforementioned information is true to my knowledge, as of Aug 5th, 2022.
